database > migrations > 2020_01_14_074019_create_anggota.php
1 <?php
2
3 use Illuminate\Support\Facades\Schema;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Database\Migrations\Migration;
6
7 class CreateAnggota extends Migration
8 {
9     /**
10      * Run the migrations.
11      *
12      * @return void
13      */
14     public function up()
15     {
16         Schema::create('anggota', function (Blueprint $table) {
17             $table->bigIncrements('id');
18             $table->string('nama_anggota', 55);
19             $table->string('alamat', 55);
20             $table->integer('telp');
21             $table->timestamps();
22         });
23     }
24
25     /**
26      * Reverse the migrations.
27      *
28      * @return void
29      */
30     public function down()
31     {
32         Schema::dropIfExists('anggota');
33     }
34 }
```

- **BUKU**

The screenshot shows the Visual Studio Code editor with a Laravel project. The Explorer panel on the left shows the project structure, including the 'migrations' directory. The '2020_01_14_074227_create_buku.php' file is open in the editor. The code defines a 'CreateBuku' migration class that extends 'Migration'. The 'up()' method creates a table named 'buku' with columns: 'id' (bigIncrements), 'judul' (string, 55), 'penerbit' (string, 55), 'pengarang' (string, 55), 'foto' (string), and 'timestamps()'. The 'down()' method drops the table if it exists.

```
1 <?php
2
3 use Illuminate\Support\Facades\Schema;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Database\Migrations\Migration;
6
7 class CreateBuku extends Migration
8 {
9     /**
10      * Run the migrations.
11      *
12      * @return void
13      */
14     public function up()
15     {
16         Schema::create('buku', function (Blueprint $table) {
17             $table->bigIncrements('id');
18             $table->string('judul', 55);
19             $table->string('penerbit', 55);
20             $table->string('pengarang', 55);
21             $table->string('foto');
22             $table->timestamps();
23         });
24     }
25
26     /**
27      * Reverse the migrations.
28      *
29      * @return void
30      */
31     public function down()
32     {
33         Schema::dropIfExists('buku');
34     }
35 }
```

- **PETUGAS**

The screenshot shows the Visual Studio Code editor with a Laravel project. The Explorer panel on the left shows the project structure, including the 'migrations' directory. The '2020_01_14_074121_create_petugas.php' file is open in the editor. The code defines a 'CreatePetugas' migration class that extends 'Migration'. The 'up()' method creates a table named 'petugas' with columns: 'id' (bigIncrements), 'nama_petugas' (string, 255), 'alamat' (string, 255), 'telp' (integer), 'username' (string, 55), and 'password' (string, 55). The 'down()' method drops the table if it exists.

```
1 <?php
2
3 use Illuminate\Support\Facades\Schema;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Database\Migrations\Migration;
6
7 class CreatePetugas extends Migration
8 {
9     /**
10      * Run the migrations.
11      *
12      * @return void
13      */
14     public function up()
15     {
16         Schema::create('petugas', function (Blueprint $table) {
17             $table->bigIncrements('id');
18             $table->string('nama_petugas', 255);
19             $table->string('alamat', 255);
20             $table->integer('telp');
21             $table->string('username', 55);
22             $table->string('password', 55);
23             $table->timestamps();
24         });
25     }
26
27     /**
28      * Reverse the migrations.
29      *
30      * @return void
31      */
32     public function down()
33     {
34         Schema::dropIfExists('petugas');
35     }
36 }
```
